

# **Quick Start Guide**

## **How to implement a custom payment plugin**

V2022.1

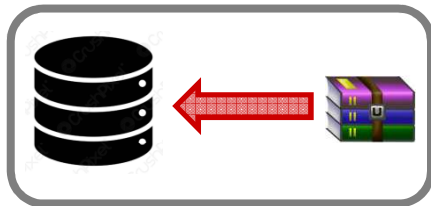

# Quick Start guide - Steps 1 & 2

## Step 1 – Unzip your package locally

Unzip your package into  
c:\mywebsite\afs\_payments\afs\_securepay

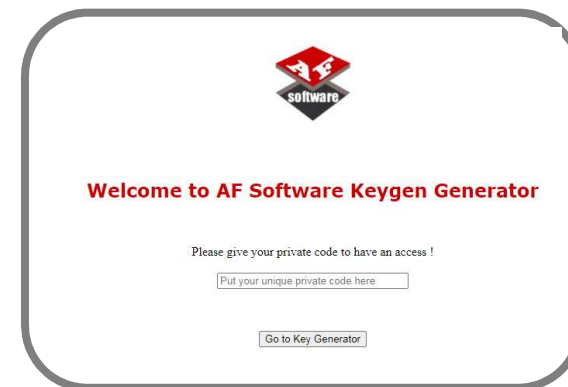

(\*) **afs\_payments\afs\_securepay** is an example  
You can choose other one directory into your project  
or other place into the hard drive.  
It is just the place where the source files are

## Step 2 – Generate your license key

Check the documentation on how to generate your trial license key and:

- Download your AFS\_XXXXX1111.lic.zip file
- Rename this file to afs\_licence.key (**No unzip it !!!**)
- Copy the afs\_licence.key to your previous directory (step 1) created into your project

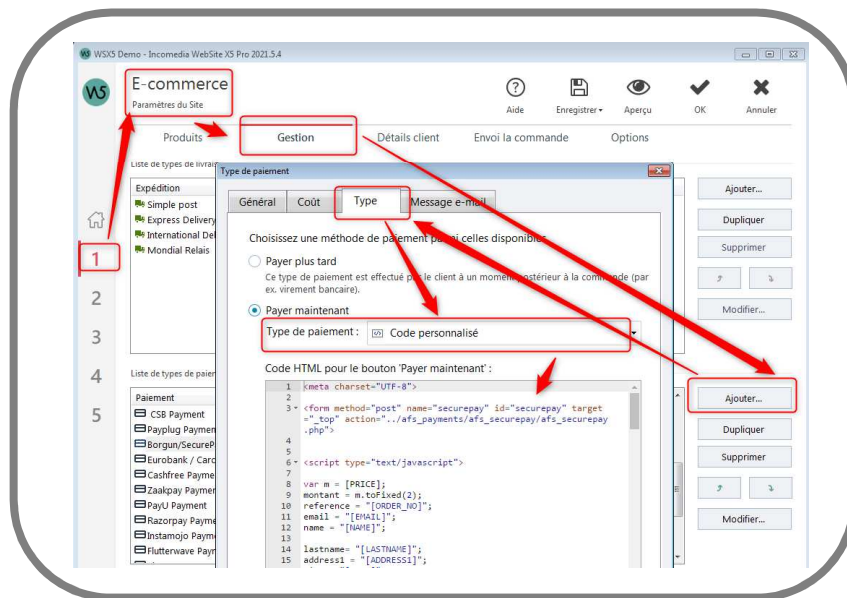

# Quick Start guide - Steps 3 & 4

## Step 3 – Create your payment

Check documentation to know how to add your html form code into your project which will get information sent by WSX5

You need to **copy** the **full content** of **afs\_form.html** into the payment window like below

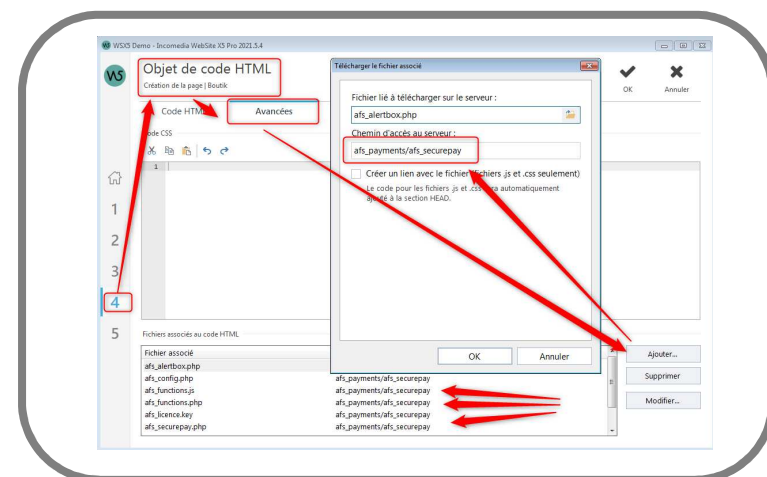

## Step 4 – Add files into your project

Check the documentation on how to add files into HTML object into your project:

-All files used by the plugin need to be imported into your project from the place where files have been unzipped into Step 1

- Take care to choose the same **directoy name** used into the **afs\_form.html** file (into our example the directory is **afs\_payments/afs\_securepay**)

This directoy name will be created and files exported by next WSX5 export

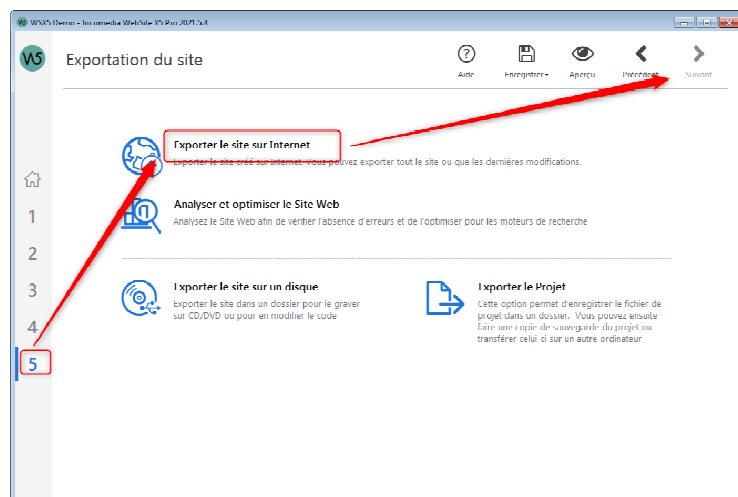

# Quick Start guide - Steps 5 & 6

## Step 5 – Export your project

Export your project to the website

## Step 6 – Test your payment plugin

Do an order and test your plugin.

Click on the icon of your payment plugin to go to the bank
