22.	How to change the default order number ? .....	46
23.	Known error messages .....	50

## 1. Before you start

Prior to use the plugin you will need to have:

- HTML/PHP return page for successful payment
- HTML/PHP return page for payment errors/cancelling
- Merchant ID code provided by Eurobank
- Private Merchant key provided by Eurobank
- License file provided by AF Software.
- To change the ordering number by a script into your project (below in this documentation)
- Your e-Commerce website ready for custom payment integration

You cannot use the plugin without these files!

Sorry but all the screen captures are in French, because it's not possible to change the language on the fly into the WebSite X5 software! I do not want to reinstall the software for each screen capture – and I hope you'll manage to successfully install the plug-in despite the screen-shots not being in English!

## 2. Plugin content

You can improve your e-Commerce website with this plugin and offer your customers a payment gateway not currently offered by the WebSite X5 Pro made by Incomedia.

You need to unzip files into a directory within the **root of your WSX5 project** on a local hard drive. If your project is here by example: **C:\Website\Projects\Myweb**

By example to unzip all files into a directory:

C:\Website\Projects\Myweb\afs\_payments\afs\_eurobank

After the unzip, you will have the following files:

<b>afs_alertbox.php</b>	--> PHP file for internal functions
<b>afs_config.php</b>	--> Configuration file for customized variables
<b>afs_cookiechecker.php</b>	--> File to check order id cookie creation
<b>afs_country.php</b>	--> File to convert country name to ISO country code
<b>afs_eurobank.php</b>	--> Main file to establish connection with the bank
<b>afs_form.html</b>	--> Form to configure your payment
<b>afs_functions.js</b>	--> Internal JS functions
<b>afs_functions.php</b>	--> Internal PHP functions
<b>afs_progress_bar.html</b>	--> Example of progress bar coding
<b>afs_route.php</b>	--> PHP functions to go bank system
<b>images</b>	--> Image directory (containing Eurobank / Cardlink logo)
<b>styles</b>	--> Directory with 3 different CSS styles for debugging page

All reproduction and distribution rights reserved (AF Software is the owner of this content)

<http://www.afsoftware.fr>

Please, do not change any of the filenames! The plugin is using these names and it will not work if you change them!

### **3. The Copyright and the ownership**

This plugin is fully created and customized by AF Software to be connected with the payment gateway from the Incomedia WebSite X5 Pro software which generates your e-Commerce website.

The custom sources of this module for operation with website remain the property of AF Software

This module and its documentation are the property of AF Software . It is prohibited to translate, decompile, modify, adapt and correct it. You may not delete or change your license number and pass it on to the third parties. Rental and loan of the module is prohibited. You cannot dissociate the different elements of the module to use them on several computers. Only the owner of the plug-in is authorized to carry out these operations!

It is forbidden to extract the partial or complete content of the module (copy, re-copy, printing, photos, videos, scan ... etc) to reproduce it in any other format and medium. The entire content is protected by intellectual property French law by article L335-2.

If you do any of the above, your rights of use are automatically terminated and the author can take various legal actions.

You are authorized, for backup purposes only, to make a copy (one copy only!) of the module. You are not authorized to make copies of the paper documentation; if such documentation is provided and / or to print the content.

You are only authorized to install and use the module on one physical station (a single hard drive, screen and keyboard) and this even if during the acquisition of your license, the module was presented on several media (i.e. CD-Rom) and for different operating systems.

This content is protected by intellectual property rights guaranteed by international copyright conventions.

The violation of one of the rights of the author is a crime of counterfeiting sanctioned by article L335-2 into the French law of the code of the intellectual property.

AF Software is the owner of this content.

## 4. Compatibility

This plugin has been developed with:

- **Website PRO v2020.2.7**
- **Eurobank / Cardink Payment v4.0**
- **PHP 7.4.11**

If you are using this plugin in other environment or version of software listed previously (old versions of the Website X5 by example), AF Software will decline any responsibility for its proper-functionality!

In these cases, AF Software could not and would not be held responsible to make it work on outdated software or PHP version nor AF Software could be obligated to fix any of the issues regarding that. In the case of website software update (done by Incomedia) or Eurobank package update, AF Software will provide various fixes so the plug-in users could use it normally as before.

If some issues appear after a major update of your WebSite X5 software, AF Software will do its best to fix any newly formed issues. But AF Software cannot provide any absolute guarantee, because AF Software is neither the owner nor business partner of the WebSite X5 – so the AF Software's influence on Website X5 development is non-existing!

Unfortunately, we cannot read into a crystal bowl for the future and what the development of the Website X5 would bring!

This plugin runs only for onetime payment! (full payment in one time, not splitted)

With this plugin you **cannot receive an email with the internet link to download a digital product – so DIGITAL goods should be sold like any other goods!** But the link into the order confirmation email is not sent by the Website X5 software!

The above mentioned is not an issue with this plugin, but an issue with Website X5 software. This **option (automatic download of digital goods upon the purchase) works ONLY with integrated PayPal payment solution and that's it!**

There is **no API or open functions to use this one** with external payment solution! It works only with Paypal payment !

OK Annuler

## 5. How to use it?

You can use this plugin in two (2) different ways:

- Manual redirection by clicking to go to the payment site;
- Automatic redirection after a customizable timeout to go to the payment site.

Automatic redirection is a feature not provided into the Website X5 software!

Please check the documentation on how to activate these two different modes!

## 6. How to get a license key?

To run this plugin correctly you need to get a license key provided by AF Software. The trial key is completely free of charge and you can generate it yourself from AF Software website.

This option is handy because you can generate your trial license key when you are ready for testing into your environment. The default trial period is 30 days and it will start when you generate your license key file.

**Before generating** your trial license key, you **need to ask** AF Software to give you the **private code to unlock** the key generator. Please contact us via e-mail to get the private code!

After reception of your private code you can go to:

**[https://www.afsoftware.fr/afs\\_keygen/afs\\_intro.php](https://www.afsoftware.fr/afs_keygen/afs_intro.php)**

to have an access to the key generator.

Please note - your **access code** will **run one time only!**

The layout of the key generator's welcome page is showed below:

## Welcome to AF Software Keygen Generator

Please give your private code to have an access !

---

[www.afsoftware.fr](http://www.afsoftware.fr)

(c) 2014-2019

All reproduction and distribution rights reserved (AF Software is the owner of this content)

<http://www.afsoftware.fr>

Please follow the instructions on the screen to generate your key.

If you need more information - consult the chapter "How to generate my evaluation key?"

After the key generation and the downloaded .zip file, do not forget **to rename the downloaded zipped key** file to **afs\_licence.key**. That's all to do.

Do not try to unzip the downloaded file! It is not a real zip file - so the unzipping will not work!

**DO NOT UNZIP THE FILE!**

**JUST RENAME IT LIKE DESCRIBED ABOVE!**

When your license key file is ready, you just need to copy it into the installation directory of your WSX5 project (on your PC) like in our example directory:

C:\Website\Projects\Myweb\afs\_payments\afs\_eurobank\

This file (and others) will be needed for linking all the necessary files with your webshop page! The explanation will follow in the next pages!

## 7. How to configure the Eurobank parameters?

To run correctly, this plugin needs some parameters from Eurobank. The below information are free for testing purpose.

Testing parameters are:

**Merchant id:** 0101119349

**Payment URL:** <https://euro.test.modirum.com/vpos/shopandlermpi>

**Private merchant key:**

```

Credit Card information for testing purpose only:

**Credit Card Number:** 4242 4242 4242 4242

**Month:** any month

**Year:** any year after actual

**CVV:** any 3 digits

**Name :** any name

## 8. How to configure returns URL's?

You need also to provide your **return URLs** (payment OK page, payment ERROR / CANCELLED page and) into **afs\_config.php** file:

```
/* To configure Return's URLs after payment */
```

```
$AFS_URL_Payment_Error = 'https://wsx5demo.afsoftware.fr/paiement-error.html';
```

```
$AFS_URL_Payment_Success = 'https://wsx5demo.afsoftware.fr/paiement-ok.html';
```

After setting the above - your **afs\_config.php** file is ready to be used!

## 9. How to integrate custom payment into Website?

Configuration is done in two (2) steps to configure the new payment gateway.

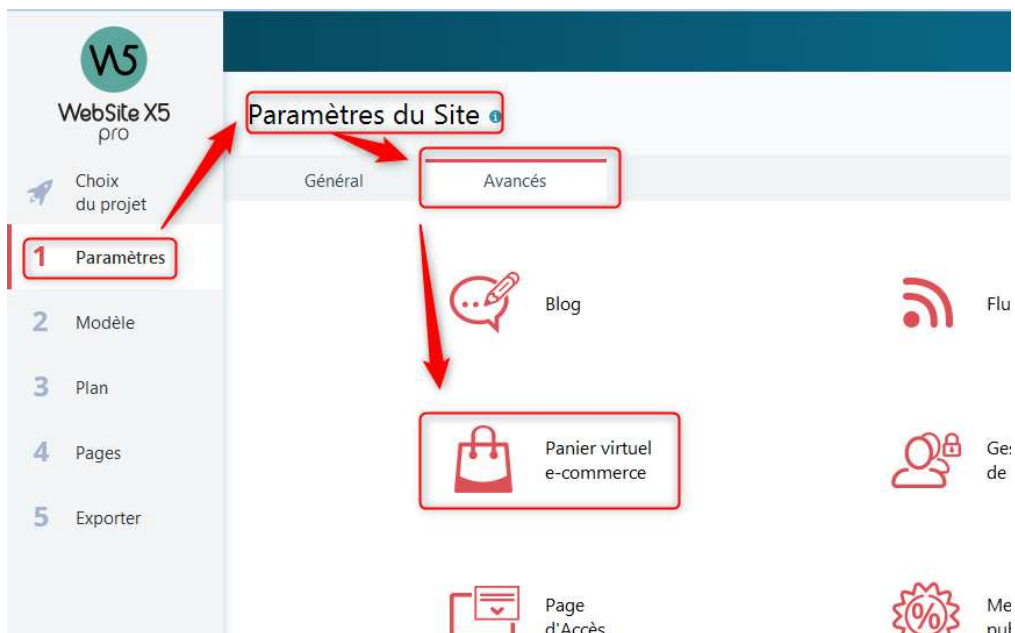

**1<sup>st</sup> STEP** > configure the payment gateway interface into the e-Commerce cart

**2<sup>nd</sup> STEP** > configure the project to upload all the necessary files to your website from the project during export

- **Configuration of the payment gateway**

To be able to add a new custom payment gateway - your e-Commerce project needs to be ready before you can do this step!

Follow the steps below **to go to an e-Commerce cart configuration**

And click on '**Add**' to add a new payment gateway

OK Annuler

Here you need to put the payment name and also to add a payment-icon (picture). Click **OK** to continue.

Next, you need to click on a 'Type' tab.

In this window you **will copy/paste** the **content** of **afs\_form.html** file – but **you MUST replace the following code-parameters with your own parameters first!**

So, open the content of **afs\_form.html** and replace the following:

First, replace **ONLY** the part of code **in bold** with your path:

```
<meta charset="UTF-8">
```

```
<form method="post" name="eurobank" id="eurobank" target="_top"
action="../afs_payments/afs_eurobank/afs_eurobank.php">
```

```
<script type="text/javascript">
```

```
var m = [PRICE];
montant = m.toFixed(2);
reference = "[ORDER_NO]";
```

```
email = "[EMAIL]";
name = "[NAME]";
```

```
lastname= "[LASTNAME]";
address1 = "[ADDRESS1]";
```

All reproduction and distribution rights reserved (AF Software is the owner of this content)

<http://www.afsoftware.fr>

```
city = "[CITY]";
```

```
country = "[COUNTRY]";
```

```
zippostalcode = "[ZIPPOSTALCODE]";
```

```
document.getElementById('montant').value = montant;  
document.getElementById('reference').value = reference;  
document.getElementById('email').value = email;  
document.getElementById('name').value = name;  
document.getElementById('lastname').value = lastname;  
document.getElementById('address1').value = address1;  
document.getElementById('country').value = country;  
document.getElementById('city').value = city;  
document.getElementById('zippostalcode').value = zippostalcode;
```

```
document.cookie = 'afs_payment='+ reference + '; path=/';  
</script>
```

```
<input type="image" id="image" href="" src="../../cart/images/logo1-eurobank.png" target=_blank name="clicImage"/>
```

```
<input type='hidden' id='montant' name='montant' size='10'value=''><br><br>  
<input type='hidden' id='reference' name='reference' size='10'value=''><br><br>  
<input type='hidden' id='email' name='email' size='10'value=''><br><br>  
<input type='hidden' id='name' name='name' size='10'value=''><br><br>  
<input type='hidden' id='lastname' name='lastname' size='10'value=''><br><br>  
<input type='hidden' id='address1' name='address1' size='10'value=''><br><br>  
<input type='hidden' id='city' name='city' size='10'value=''><br><br>  
<input type='hidden' id='country' name='country' size='10'value=''><br><br>  
<input type='hidden' id='zippostalcode' name='zippostalcode' size='10'value=''>
```

```
</form>
```

**Please do not modify any other part of the code!**

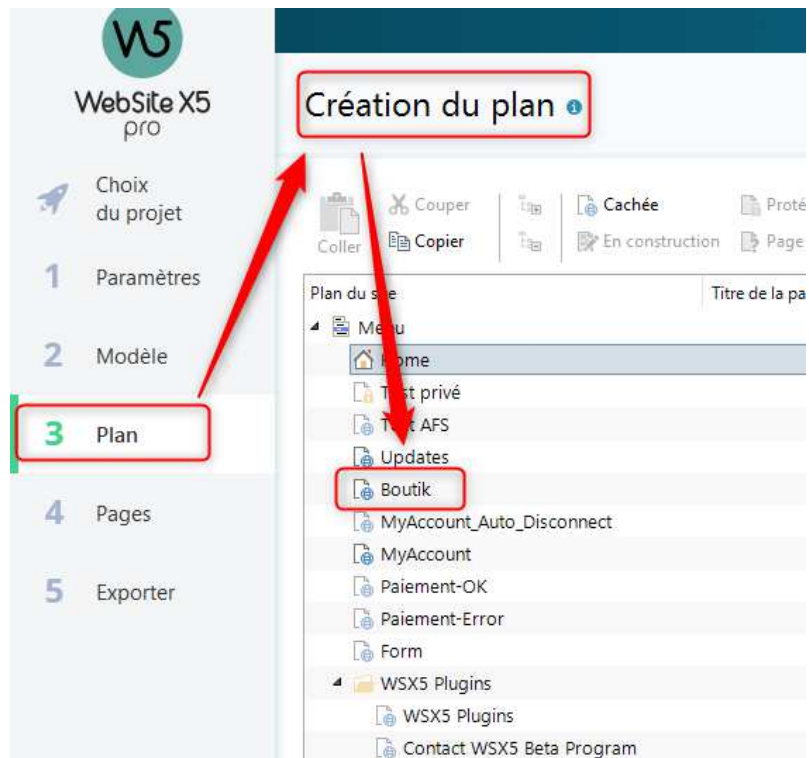

**NOTE:** on the following pages – you will get more information on how to customize the afs\_form.html even more – so it will be a good thing to SAVE the code so it could be ready for additional customization. OR, you can do the future customization right in your project webpage as described above (in the custom payment settings options).

- **Configure Website X5 to upload all files on web server during an export**

You need to **add an HTML object** into your e-Commerce page of your project, like below. **You can use any page** of your project (just one page!)– it doesn't matter what would be the page where you will add this HTML object – but it has to be the part of your webshop project!

All reproduction and distribution rights reserved (AF Software is the owner of this content)

<http://www.afsoftware.fr>

Open the page of your choice and add the HTML object:

Into the HTML object, click on '**Advanced**' tab and **add all necessary files** which have been unzipped into our example into C:\Website\Projects\Myweb\afs\_payments\afs\_eurobank

You should add the files **one by one** – thy system doesn't allows adding more files at once!

At minimum, you would need to add all the selected files below:

Nom	Modifié le	Type	Taille
images	29/12/2020 19:00	Dossier de fichiers	
styles	14/12/2020 15:34	Dossier de fichiers	
afs_alertbox.php	09/05/2020 18:15	Fichier PHP	20 Ko
afs_config.php	29/12/2020 18:46	Fichier PHP	3 Ko

afs_progress_bar.html	12/08/2020 13:00	Chrome HTML D...	2 Ko
afs_route.php	29/12/2020 17:15	Fichier PHP	12 Ko

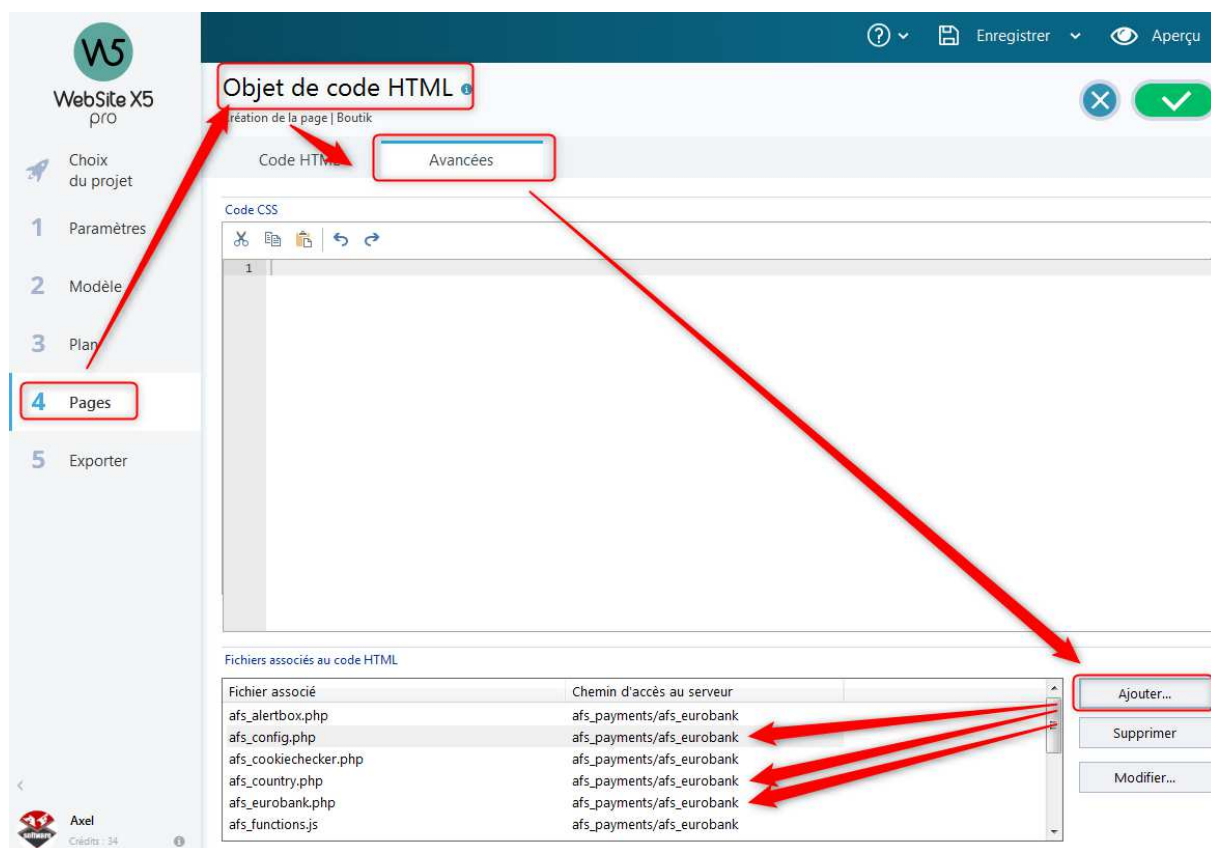

All reproduction and distribution rights reserved (AF Software is the owner of this content)

<http://www.afsoftware.fr>

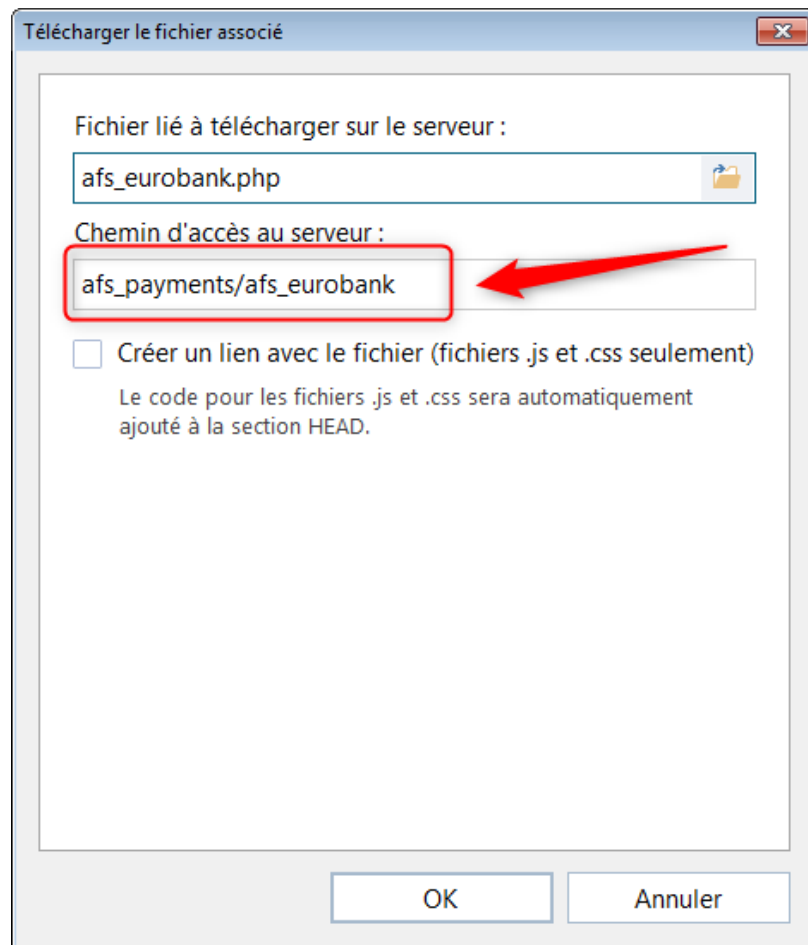

All files added here will be sent to the web server during the next export of your project. (if you are using the built-in WSX5 FTP manager!).

When you add your files, take care to **provide the right directory name** for each file like below. By default the path is 'files'. You need to change it to yours!

After this operation, we recommend that you **refresh your project** by CTRL + Preview (eye icon top right into Website X5 interface)

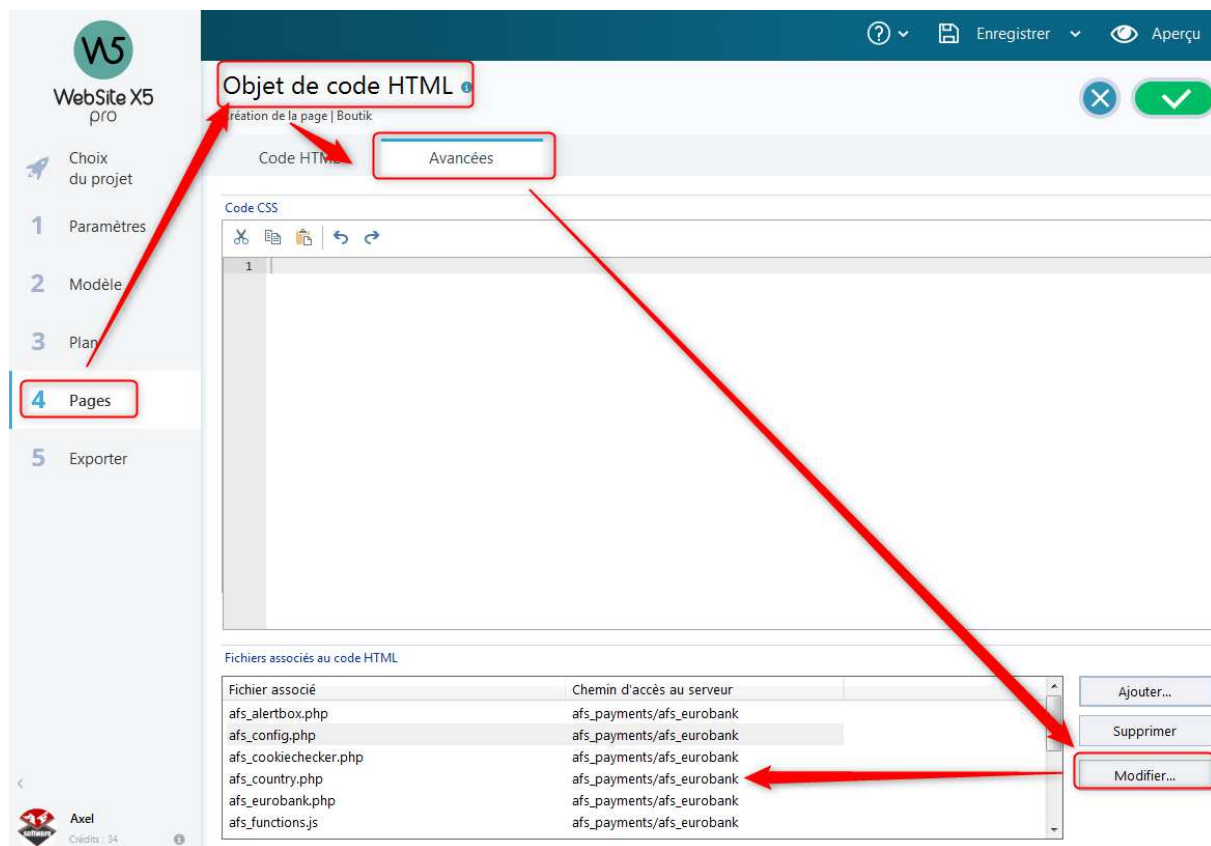

During the next project upload - all the files will be uploaded to the web server into the chosen directory.

#### **IMPORTANT:**

If you change the content of any of the files after **the first upload** (afs\_config.php file or any other file from "the bundle"), you will need to "force" Website X5 to re-send your modified file(s) on the next upload!

This is not an issue of the plugin, but it's known WSX5's "bug"! If an export has been done once, the next one **will probably not send** the files again – so the software will not replace any of the modified file(s) on your server with the updated version!

A **good practice is to check on the web server** (via an independent FTP manager) **if the modified file(s) has been correctly** uploaded to your web server!

## 10. How to run payment manually or automatically?

Below is an explanation on how to run in one of the two modes.

- **Manual redirection to the payment site**

In this running mode we are exactly like in any default payment gateway provided by website X5. After an order, the customer needs to click on a button to go to the payment site.

In the case the customer does not click on the button to go to the payment site, she/he will be able to do it so by clicking on the button into the order confirmation email.

Below is a sample of code to copy into the **payment gateway form** (check chapter: How to integrate custom payment into Website) to achieve a manual redirection to the payment site.

All reproduction and distribution rights reserved (AF Software is the owner of this content)

<http://www.afsoftware.fr>

**Do not forget to change paths by yours** like explained into chapter: How to integrate custom payment into Website)

```
<meta charset="UTF-8">
```

```
<form method="post" name="eurobank" id="eurobank" target="_top"
action=" ../afs_payments/afs_eurobank/afs_eurobank.php">
```

```
<script type="text/javascript">
```

```
var m = [PRICE];
montant = m.toFixed(2);
reference = "[ORDER_NO]";
email = "[EMAIL]";
name = "[NAME]";
```

```
lastname= "[LASTNAME]";
address1 = "[ADDRESS1]";
city = "[CITY]";
country = "[COUNTRY]";
zippostalcode = "[ZIPPOSTALCODE]";
```

```
document.getElementById('montant').value = montant;
document.getElementById('reference').value = reference;
document.getElementById('email').value = email;
document.getElementById('name').value = name;
document.getElementById('lastname').value = lastname;
document.getElementById('address1').value = address1;
document.getElementById('country').value = country;
document.getElementById('city').value = city;
document.getElementById('zippostalcode').value = zippostalcode;
```

```
document.cookie = 'afs_payment='+ reference + '; path=/' ;
</script>
```

```
<input type="image" id="image" href=" ../cart/images/logo1-eurobank.png "
target=_blank name="clImage"/>
```

```
<input type='hidden' id='montant' name='montant' size='10'value=''><br><br>

<input type='hidden' id='zippostalcode' name='zippostalcode' size='10'value=''>
```

```
</form>
```

The displaying will be:

Numéro de commande: <b>AFS - 78745</b>	Date de la commande: Mer 30 Déc 2020	Total: 20.15 €
---	---	-------------------

**Payment Eurobank / Cardlink**

 Bonjour,  
Nous vous remercions de votre commande.

**Rester sur cette page** car vous allez être **redirigé automatiquement vers le site du paiement** dans 15 secondes.  
Ou cliquez sur l'image ci dessous !

Dès réception de votre paiement, votre commande sera traitée.

Vous pouvez nous contacter sur [info@afsoftware.fr](mailto:info@afsoftware.fr)

Cordialement  
Toute l'équipe

- **Automatic redirection to the payment site (no click on the link needed!)**

In this running mode we change the default Website X5 procedure by adding a javascript code.

This option is very useful because - after the order confirmation page gets displayed to the user - the redirection to the payment site will be done automatically after a customizable timeout-period with no action needed from the user!

With automatic redirection, the customer will continue to receive the order confirmation email with payment information (button to go the payment site).  
So, if the customer goes directly to the payment website after his order and execute this payment, payment information (button to go the payment site) into the email will be not useful.

If there is an error with the payment or it got canceled - the button-link which the buyer would receive in the email will not be useful because the payment will be generating an error and so the user would need to re-order the chosen items again from the webshop!

Below is a sample of code to copy into the **payment gateway form** (check chapter: How to integrate custom payment into Website) to have an automatic redirection to the payment site.

**Do not forget to change paths by yours** like explained in the chapter: How to integrate custom payment into Website)

```
<meta charset="UTF-8">

<form method="post" name="eurobank" id="eurobank" target="_top"
action="../afs_payments/afs_eurobank/afs_eurobank.php">

<script type="text/javascript">

var m = [PRICE];
montant = m.toFixed(2);

reference = "[ORDER_NO]";
email = "[EMAIL]";
name = "[NAME]";

lastname= "[LASTNAME]";
address1 = "[ADDRESS1]";
city = "[CITY]";
country = "[COUNTRY]";

zippostalcode = "[ZIPPOSTALCODE]";

document.getElementById('montant').value = montant;
document.getElementById('reference').value = reference;
document.getElementById('email').value = email;
document.getElementById('name').value = name;
document.getElementById('lastname').value = lastname;
document.getElementById('address1').value = address1;
document.getElementById('country').value = country;
document.getElementById('city').value = city;
document.getElementById('zippostalcode').value = zippostalcode;

document.cookie = 'afs_payment='+ reference + '; path=/';
</script>

<input type="hidden" id="image" href=" src="../cart/images/logo1-eurobank.png "
target=_blank name="clikImage"/>

<input type='hidden' id='montant' name='montant' size='10'value=''><br><br>
<input type='hidden' id='reference' name='reference' size='10'value=''><br><br>
<input type='hidden' id='email' name='email' size='10'value=''><br><br>
<input type='hidden' id='name' name='name' size='10'value=''><br><br>
<input type='hidden' id='lastname' name='lastname' size='10'value=''><br><br>

Cordialement  
Toute l'équipe

- **Automatic redirection to the payment site with the optional 'click'**

With the previous script you have the possibility to put a picture into the mode type = "**image**" to display it and this will also give you the possibility to 'click' on it before the timeout-period runs-out to go to the payment site.

```
<input type="image" id="image" href="
src="https://wsx5demo.afsoftware.fr/cart/images/logo1-eurobank.png" target=_blank
name="clikImage"/>
```

All reproduction and distribution rights reserved (AF Software is the owner of this content)

<http://www.afsoftware.fr>

**Do not forget to change paths by yours** like explained into chapter: How to integrate custom payment into Website)

The full script will be:

```
<meta charset="UTF-8">

<form method="post" name="eurobank" id="eurobank" target="_top"
action="../afs_payments/afs_eurobank/afs_eurobank.php">

<script type="text/javascript">

var m = [PRICE];
montant = m.toFixed(2);
reference = "[ORDER_NO]";
email = "[EMAIL]";
name = "[NAME]";

lastname= "[LASTNAME]";
address1 = "[ADDRESS1]";
city = "[CITY]";
country = "[COUNTRY]";
zippostalcode = "[ZIPPOSTALCODE]";

document.getElementById('montant').value = montant;
document.getElementById('reference').value = reference;
document.getElementById('email').value = email;
document.getElementById('name').value = name;
document.getElementById('lastname').value = lastname;
document.getElementById('address1').value = address1;
document.getElementById('country').value = country;
document.getElementById('city').value = city;
document.getElementById('zippostalcode').value = zippostalcode;

document.cookie = 'afs_payment='+ reference + '; path=/';
</script>

<input type="image" id="image" href=" src="../cart/images/logo1-eurobank.png "
target=_blank name="clikImage"/>

<input type='hidden' id='montant' name='montant' size='10'value=''><br><br>
<input type='hidden' id='reference' name='reference' size='10'value=''><br><br>
<input type='hidden' id='email' name='email' size='10'value=''><br><br>
<input type='hidden' id='name' name='name' size='10'value=''><br><br>

<input type='hidden' id='lastname' name='lastname' size='10'value=''><br><br>
<input type='hidden' id='address1' name='address1' size='10'value=''><br><br>
<input type='hidden' id='city' name='city' size='10'value=''><br><br>

<input type='hidden' id='country' name='country' size='10'value=''><br><br>
<input type='hidden' id='zippostalcode' name='zippostalcode' size='10'value=''>

</form>
```

All reproduction and distribution rights reserved (AF Software is the owner of this content)

<http://www.afsoftware.fr>

```
<script language="javascript">
  setTimeout(confirmation, 15000);

function confirmation() {
  document.getElementById(eurobank).submit();
}

</script>
```

In this situation, after presenting with the order confirmation page, the user/buyer could see the message with the explanation of the automatic redirection to the payment gateway (with the progress bar displayed). The buyer/user has the possibility to go to the payment site right away by clicking on the image - without needing to wait for the automatic-redirection!

The displaying will be:

Numéro de commande: <b>AFS - 78745</b>	Date de la commande: Mer 30 Déc 2020	Total: 20.15 €
---	---	-------------------

## 11. How to display a progress bar for an automatic payment?

A nice feature during an automatic payment is to display a progress bar before to be redirected to the payment site.

Below is an example on how to integrate this option in the **payment gateway form** (check chapter: How to integrate custom payment into Website) .

In this case, the progress bar is configured for 15 seconds time-delay.

**NOTE:** AF Software **does not support** the changing or further customization of the below script! You need to have the knowledge to change anything.  
AF Software could customize the script to your liking for additional fee!

**Please do not forget to change paths by yours (bold parts of the script)** - like explained into chapter: How to integrate custom payment into Website)

```
<meta charset="UTF-8">
```

```
<form method="post" name="eurobank" id="eurobank" target="_top"
action=" ../afs_payments/afs_eurobank/afs_eurobank.php">
```

```
<script type="text/javascript">
```

```
var m = [PRICE];
montant = m.toFixed(2);
reference = "[ORDER_NO]";
email = "[EMAIL]";
name = "[NAME]";
```

```
lastname= "[LASTNAME]";
address1 = "[ADDRESS1]";
city = "[CITY]";
country = "[COUNTRY]";
zippostalcode = "[ZIPPOSTALCODE]";
```

```
document.getElementById('montant').value = montant;
document.getElementById('reference').value = reference;
document.getElementById('email').value = email;
document.getElementById('name').value = name;
document.getElementById('lastname').value = lastname;
document.getElementById('address1').value = address1;
document.getElementById('country').value = country;
document.getElementById('city').value = city;
document.getElementById('zippostalcode').value = zippostalcode;
```

```
document.cookie = 'afs_payment='+ reference + '; path=/';
</script>
```

All reproduction and distribution rights reserved (AF Software is the owner of this content)

<http://www.afsoftware.fr>

```
<input type="image" id="image" href="" src="../../cart/images/logo1-eurobank.png"
target=_blank name="clicImage"/>
```

```
<!-- BEGIN for progress bar for 10s -->
```

```
<!--
```

**You change the number of second of the progress bar by changing the ratio variable only**

```
<script>
```

```
var ratio = 1; /* 10 s by default
```

```
var ratio = 3; /* for 30 s
```

```
var ratio = 0.5; /* for 5 s
```

```
-->
```

```
<style>
```

```
#progressbar
```

```
{
```

```
width:100px;
```

```
padding:1px;
```

```
background-color:white;
```

```
border:1px solid grey;
```

```
height:10px;
```

```
text-align: center;
```

```
margin-left:auto;
```

```
margin-right:auto;
```

```
}
```

```
#indicator
```

```
{
```

```
width:0px;
```

```
background-color:#cc0000;
```

```
height:10px;
```

```
margin:0;
```

```
}
```

```
</style>
```

```
<script>
```

```
// To change the number of seconds change ratio value
```

```
var ratio = 1; // 10 s by default
```

```
var maxprogress = 100 * ratio;
```

```
var actualprogress = 0;
```

```
var itv = 0;
```

```
function prog()
```

```
{
```

```
if(actualprogress >= maxprogress / ratio )
```

```
{
```

```
clearInterval(itv);
```

```
return;
```

```
}
```

```
actualprogress += 1 / ratio;
```

Toute l'équipe

By clicking on the image you'll go directly to the payment page to finalize your payment and order.  
You can see on the image below that your order ID is retrieved by the Eurobank payment system.

You have been redirected to Eurobank e-Commerce environment.

**Transaction Details**

Merchant: Eurobank  
Merchant site: <https://www.eurobank.gr>

Order amount:  
**160.00 €**

Pay with a wallet

or enter your card

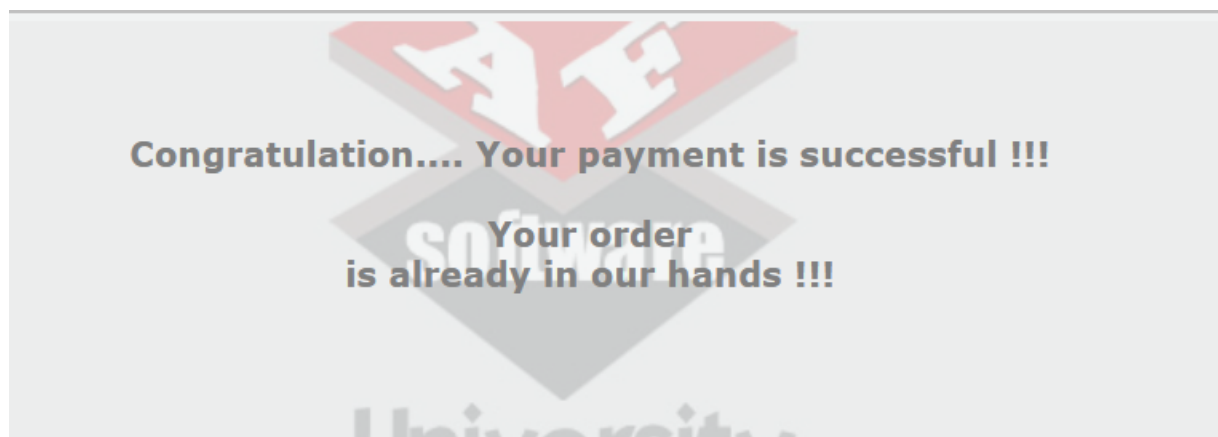

Cancel

You can put your **real credit card** information to check the system if you are into **production mode**:

A screenshot of the Eurobank payment interface. On the left, it shows the Eurobank logo and text: 'You have been redirected to Eurobank e-Commerce environment.' Below this is 'Transaction Details' with 'Merchant: Eurobank' and 'Merchant site: https://www.eurobank.gr'. A box shows 'Order amount: 160.00 €'. At the bottom are logos for VISA SECURE and Mastercard ID Check. On the right, there's a '< Back' link and a red-bordered box titled 'Enter your card:'. Inside this box are fields for 'Card number', 'Expiration date' (with 'Month' and 'Year' dropdowns), 'Verification Code' (with a 'CVV' field), and 'Name on card'. Below the red box are 'Cancel' and 'PAYMENT' buttons.

And upon the credit-card validation – your payment is done! and you go directly to the success page

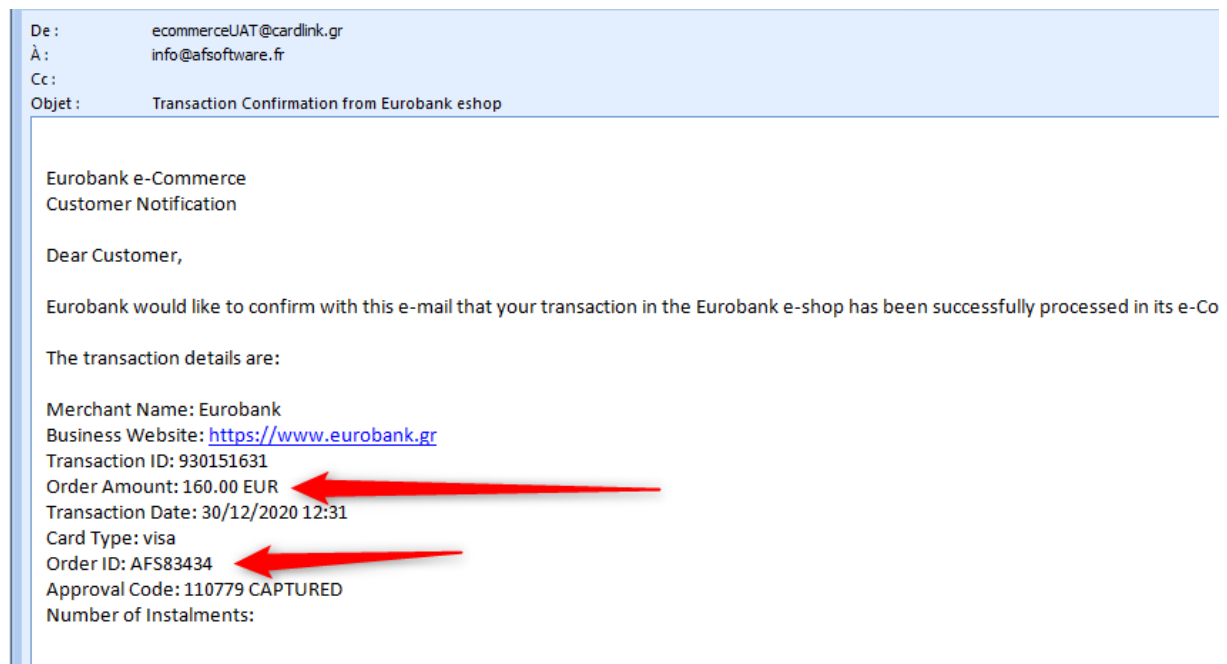

### 13. Message from the Eurobank payment gateway upon the successful payment

If the payment was successful - you will receive an email from the Eurobank like below:

### 14. How to use the debug mode?

You can use the Debug mode for technical purposes and issues. AF Software will help you on this in the case of any problem with the plugin.

To activate the debug mode you need to change the **\$AFS\_Debug** variable into **afs\_config.php** file

```
/* For testing/Debug purpose ONLY */          /* = 1 for debug or = 0 for production */  
$AFS_Debug = '1';
```

By using this mode some new information will be displayed on the page. And to continue it is mandatory to click on the button at the bottom of the page to go to the payment site.

All parameters necessary to do the payment will be here, for checking and debugging (see below):

All reproduction and distribution rights reserved (AF Software is the owner of this content)

Return URL Cancel	https://wsx5demo.afsoftware.fr/paiement-error.html

In this debug mode **you cannot continue** to go to the payment system. This screen will be useful to AF Software for debugging only.

We can check here that **all mandatory values** (and only these values) are correctly retrieved from Website form before to be send to the payment system.

## 15. How to change the default language of the payment system?

You can change the language of the payment system interface to the one of your choice. To do that you need to change the parameter **\$AFS\_Payment\_Language** into **afs\_config.php** file.

You need to put the ISO 2 digits of the country for the language. This language must be supported by the payment gateway system !

The parameter **\$AFS\_Payment\_Language** will be used for all users.

## 16. How to change the currency of the payment system?

You can change the currency of the payment system interface. To do that, you need to change the parameter **\$AFS\_Currency** into **afs\_config.php** file.

You need to put the ISO 3 digits of the currency. This currency must be supported by the payment gateway system !

The supported currency is EUR by default:

## 17. How to generate my evaluation key?

After the reception of your private code - you can unlock the key generator to create your evaluation key file. Useful parameters are below.

## Welcome to AF Software Keygen Generator

You are in User mode

All fields are mandatory !

Expiration Date (Default 30 days):

Website Name:

Company code (delivered by the bank):

Company code - (to check it) :

Company Name:

Email Contact:

1 - Your website name (www.mywebname.com) where the plug-in will be installed

2 - **Merchant ID** or **company code** provided by the Eurobank (The private secret key received by Eurobank is not used here)

3 - Insert it again for the verification purposes (Merchant ID or company code provided by the Eurobank.

4 - Company name

5 - Contact email

All fields are mandatory to generate your license key file!

All reproduction and distribution rights reserved (AF Software is the owner of this content)

<http://www.afsoftware.fr>

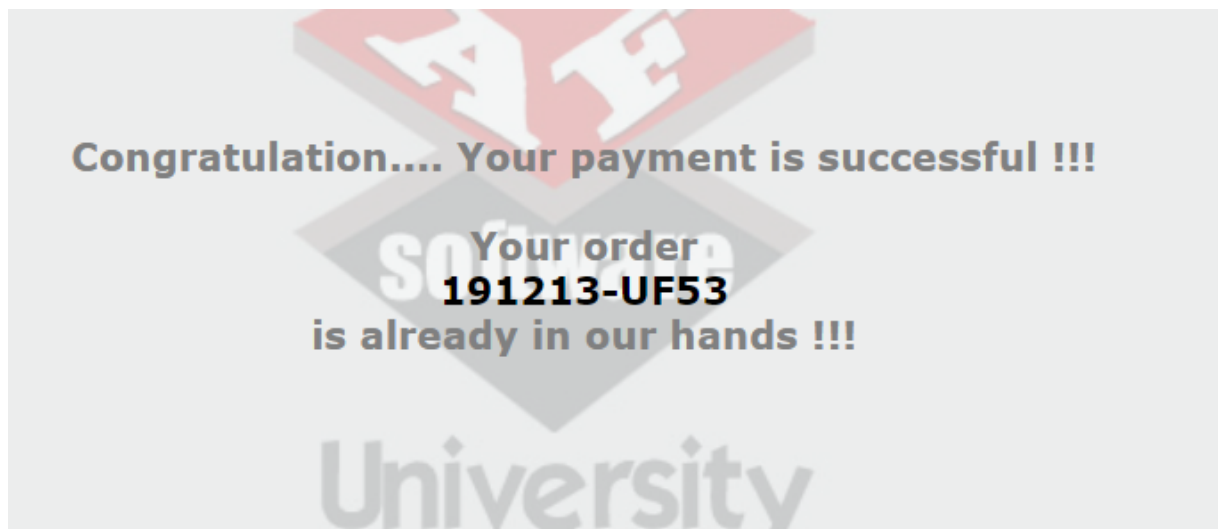

## **18. How to configure the return page after a payment OK ?**

By default into Website X5 software it is not possible to get the order ID upon the payment.

Here we offer you a solution to configure the return OK page (within the HTML object) and to retrieve the order ID to display it on the page by using a cookie initialized during a payment

By example our return OK page is displayed as below:

You need to use an HTML object in the return OK page:

And we add the next HTML code into our page to display message and order ID by reading a cookie.

```
<style>
/* Pour aligner le texte au centre */
section#afsoftware
{
    text-align: center; /* Ajouté par AFS */
    margin-left:auto; /* Ajouté par AFS */
    margin-right:auto; /* Ajouté par AFS */
}

</style>

<!-- Pour récupérer le cookie -->
<script>
    function getCookie(name)
    {
        var re = new RegExp(name + "=[^;]+");
        var value = re.exec(document.cookie);
        return (value != null) ? value[1] : null;
    }

    var num_order = getCookie('afs_payment');
</script>
```

All reproduction and distribution rights reserved (AF Software is the owner of this content)

<http://www.afsoftware.fr>

```
<!-- Pour afficher le message -->
<section id="afsoftware">

<div id="afs" >
<!-- Pour debug -->
<input type="hidden" id="order" value="demo">

    <strong>
    <font face="Verdana" color="grey">
    <span style="font-size:16pt;">
    <br><br>
    Congratulation.... Your payment is successful !!!
    <br><br>
    Your order
    <font face="Verdana" color="black">
    <p id="texte">dddd</p>
    </font>
    is already in our hands !!!

    </span>
    </font>
    </strong>

</div>
</section>

<!-- Pour réécrire les champs avec le numéro de commande dans le cookie -->
<script>
document.getElementById('order').value = num_order;
document.getElementById('texte').innerHTML = num_order;
</script>
```

You can change this HTML code.

No support is offered by AF Software for any text-object customization!

## 19. How to configure the return page after a payment Not OK?

By default into Webiste X5 it is not possible to get the order ID after a payment.

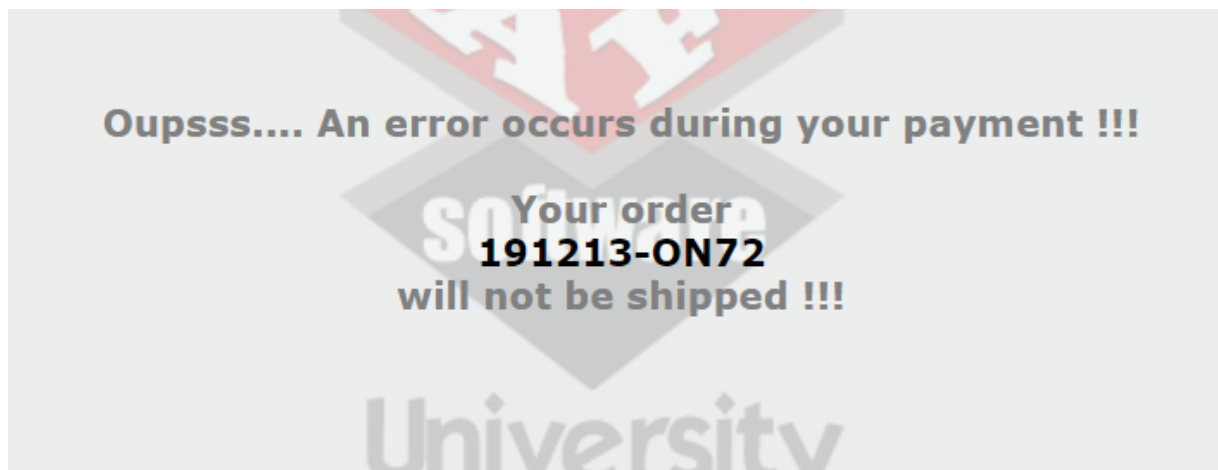

Here we can offer you the solution to configure the return NOT OK page by an HTML object and to retrieve the order ID to display it on the page by using a cookie initialized during a payment.

In our case, the return OK page is displayed like below:

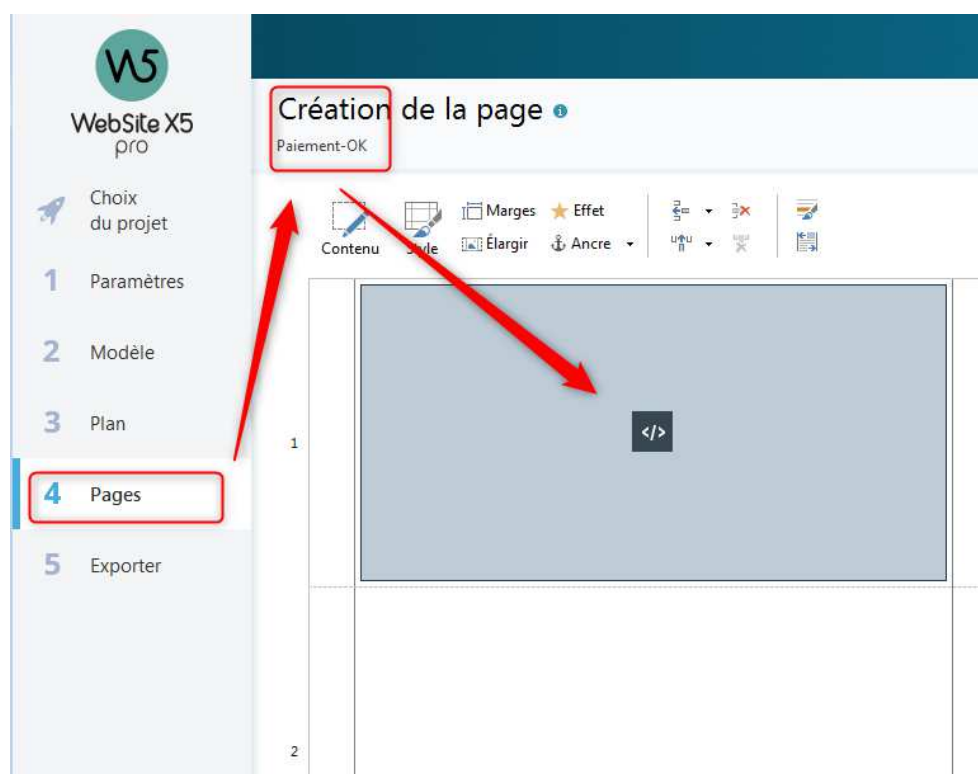

All reproduction and distribution rights reserved (AF Software is the owner of this content)

<http://www.afsoftware.fr>

We need to use a HTML object into the return OK page:

And we add the next HTML code into our page to display message and order ID by reading a cookie.

```
<style>
/* Pour aligner le texte au centre */
section#afsoftware
{
    text-align: center; /* Ajouté par AFS */
    margin-left:auto; /* Ajouté par AFS */
    margin-right:auto; /* Ajouté par AFS */
}

</style>

<!-- Pour récupérer le cookie -->
<script>
    function getCookie(name)
    {
        var re = new RegExp(name + "=[^;]+");

        var value = re.exec(document.cookie);
        return (value != null) ? value[1] : null;
    }

var num_order = getCookie('afs_payment');
</script>

<!-- Pour afficher le message -->
<section id="afsoftware">

<div id="afs" >
<!-- Pour debug -->
<input type="hidden" id="order" value="demo">

        <strong>
        <font face="Verdana" color="grey">
        <span style="font-size:16pt;">
        <br><br>
        Oupsss.... An error occurs during your payment !!!
        <br><br>
        Your order
        <font face="Verdana" color="black">
        <p id="texte">N° de commande</p>
        </font>
        will not be shipped !!!

        </span>
        </font>
        </strong>

</div>
</section>

<!-- Pour réécrire les champs avec le numéro de commande dans le cookie -->
<script>
document.getElementById('order').value = num_order;
document.getElementById('texte').innerHTML = num_order;

</script>
```

You can make changes in this HTML code but please note that there is no **FREE** support from AF Software for any code customization!

## 20. How to initialize the order-cookie?

The cookie initialization is done directly into the code in your custom payment window.

The line is normally already in place:

**document.cookie = 'afs\_payment='+ reference + '; path=/';**

Général Coût **Type** Message e-mail

Choisissez une méthode de paiement parmi celles disponibles.

☐ Payer plus tard  
Ce type de paiement est effectué par le client à un moment postérieur à la commande (par ex. virement bancaire).

☒ Payer maintenant

Type de paiement :

Code HTML pour le bouton 'Payer maintenant' :

```
40
41
42 // Bug fixed in v2013.14 . Hidden works fine
43 document.getElementById('montant').type = 'hidden';
44
45 // On initialise le cookie avec le No de commande
46
47 document.cookie = 'afs_payment='+ reference + '; path=/';
48
49 </script>
50
51 <input type="image" id="image" href="" src="../../cart/images
52 /logo-payzen-1.png" target=_blank name="clicImage"/>
53
54
55 <!-- Ci dessous pour progress bar de 15s -->
```

## 21. How to use afs\_cookiechecker.php tool?

In your unzipped directory you will find the **afs\_cookiechecker.php** which is useful to check if the order-cookie is correctly initialized during an order. This cookie will be used in your return pages if you follow our recommendations to get it.

This cookie is initialized into custom payment form by the following line:

```
document.cookie = 'afs_payment='+ reference + '; path=/';
```

With this line we can create a cookie during the payment process with the order ID.  
This cookie will be annulled by the end of the session.

If you use our return page option descriptions in HTML, you can have some HTML errors in your code and not be able to read the cookie right.

To check if the cookie is readable - you can use this AF Software tool to help you read it and to display its content or to display an error if the cookie has not been created correctly during the payment process.

To check if the cookie exists, we recommend to copy the **afs\_cookiechecker.php** file into the **afs\_payments** directory by example and to continue to load the file manually directly with its URL.

You need to make an order, go through the payment process and then test if you will be redirected to the return URL (OK or not OK return page). From this point you need to use the URL manually to check your cookie.

For example, use the URL with the following syntax in your browser's address bar (of course, use your own URL which contains your domain name in the code).

[https://www.monsite.com/afs\\_payments/afs\\_cookiechecker.php?cookieName=afs\\_payment](https://www.monsite.com/afs_payments/afs_cookiechecker.php?cookieName=afs_payment)

### IMPORTANT:

**Use this URL from the return URL window upon the payment!** Remember, the cookie is created during the payment - so the usage of this URL in other windows will not work!

- **Cookie is correctly detected by afs\_cookiechecker.php**

If the cookie is correctly detected by the tool - the next window will be displayed:

**Waouuuuu !!!!**

**Votre cookie est détecté !!!  
You cookie is detected !!!**

**Son contenu est:  
his content is :**

**191213-HP51**

[www.afsoftware.fr](http://www.afsoftware.fr)

(c) 2019 - Cookiechecker v 1.1

- **Cookie is not correctly detected by afs\_cookiechecker.php**

If the cookie is not correctly detected by the tool - the next window will be displayed:

Hooooooo !!!!

Votre cookie n'est pas détecté !!!  
Your cookie is not detected !!!

[www.afsoftware.fr](http://www.afsoftware.fr)

(c) 2019 - Cookiechecker v 1.1

## 22. How to change the default order number ?

By default the order number generated by Website is like:

Numéro de commande: <b>201230-JW29</b>	Date de la commande: Mer 30 Déc 2020	Total: 20.15 €
---	---	-------------------

This **number cannot be supported** by **Eurobank** system. The system supports **only letters** and **numbers** with no special characters!

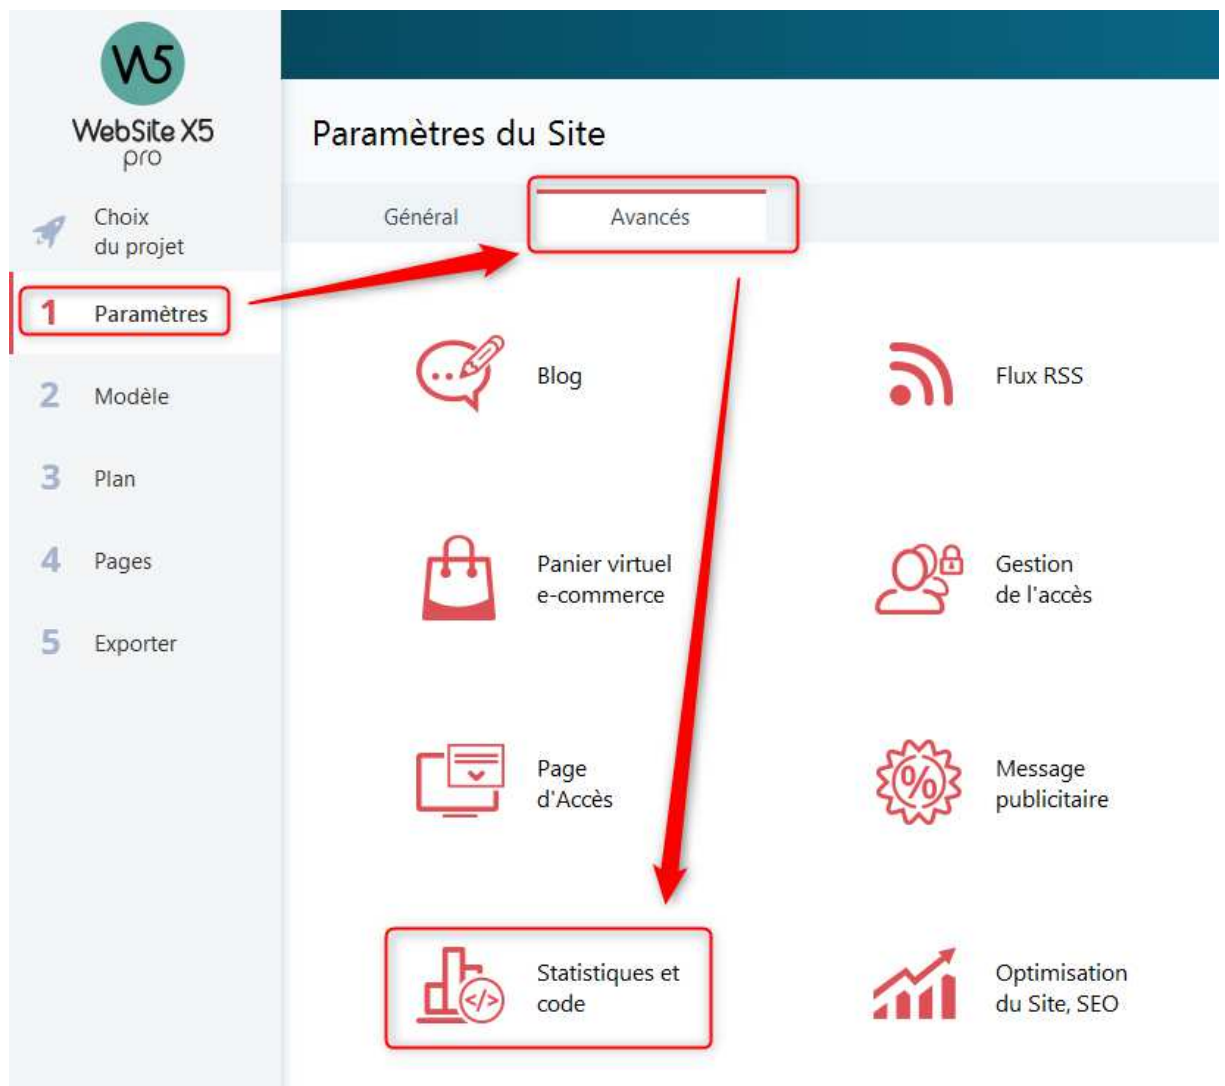

So we need to configure Website with a script to change the order numbering.

The script to change the order number is :

```
<script type="text/javascript">
x5engine.boot.push(function () {
x5engine.cart.manager.settings({
"order_no_format": "AFS[0-9][0-9][0-9][0-9][0-9]"
});
}, false, "last");
</script>
```

So you need to add this script into the **Statistic & Code** into Website

And after to open the code window **into the section before closing </HEAD>**

All reproduction and distribution rights reserved (AF Software is the owner of this content)

The order number should be like into your configuration. Here it's

Numéro de commande: <b>AFS18412</b>	Date de la commande: Mer 30 Déc 2020	Total: 28.00 €
--	---	-------------------

## 23. Known error messages

### **Invalid Merchant ID**

You can get this error when your configuration is not the good one. Please check your **afs\_config.php** file.

### **Invalid Order ID**

You can get this error if the retrieved order ID from the website form is not present or to the good format. Please check this value into the debug mode.

### **Invalid Amount**

You can get this error if the retrieved amount value from the website form is not present or to the good format. Please check this value into the debug mode.

### **Invalid or unsupported Currency**

You can get this error if the retrieved currency from the website form is not present or to the good format or not supported by the payment system. Please check this value into the debug mode.

### **billCity is required**

You can get this error if the city for the bill from the website form is not present or to the good format. Please check this value into the debug mode.

### **billAddress is required**

You can get this error if the postal address for the bill from the website form is not present or to the good format. Please check this value into the debug mode.

### **billZip is required**

You can get this error if the postal code for the bill from the website form is not present or to the good format. Please check this value into the debug mode.

### **System error 1609597509985**

It's a severe error generated by the payment system. Contact your bank to inform them about it.
